Subject: Joint Fire Science Conference and Workshop

Attached is a brochure announcing the Joint Fire Science Conference and Workshop "Crossing the Millennium: Integrating Spatial Technologies and Ecological Principles for a New Age in Fire Management." The workshop will be held in Boise, Idaho, June 15-17, 1999. It is hosted by the USDA Intermountain Fire Sciences Lab and the University of Idaho, and sponsored by the Joint Fire Science Program.

This conference and workshop is important to all government agencies, as well as private organizations and university research institutions, involved in wildland fire. The purpose is to collect, share and synthesize information in the four topic areas: mapping of fuels, vegetation, topography and fire regimes; GIS and remote sensing technologies; modeling fuels, fire behavior, fire effects, fire hazard and risk; and fuel treatment technologies, methodologies and applications.

Further information on the conference and workshop is available on the Internet at <http://firescience.for.uidaho.edu> or by contacting Greg Gollberg at the University of Idaho on 208-883-5545.
